

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) Method of recording information on a recordable multi-layer DVD record carrier, said record carrier comprising a first information layer and a second information layer for storing the information, wherein information is incrementally recorded on the DVD record carrier such that the area regarded as containing written information on the first information layer is substantially equal to the area regarded as containing written information on the second information layer, and wherein said information which is incrementally recorded on the multi-layer DVD is reproducible on a DVD-ROM player without errors the information is stored including one fragment of written information contained within at least one other fragment of written information.

2. (Currently amended) Method The method according to claim 1, wherein the area regarded as containing written information on the first information layer and/or the area regarded as containing written information on the second information layer comprise an area where no information is recorded.

3. (Previously presented) Recording device for recording information on a recordable multi-layer DVD record carrier operative for executing a method as claimed in claim 1.

4. (New) The method according to claim 1, wherein the at least one other fragment of written information spans the first and second information layer.

5. (New) The method according to claim 1, wherein the at least one other fragment of written information is a hierarchical fragment and wherein the hierarchical fragment contains at least one other hierarchical fragment.

6. (New) The method according to claim 5, wherein the hierarchical fragment spans the first and second information layer.

7. (New) The method according to claim 1, wherein at least one of the one fragment of written information and the at least one other fragment of written information are open and a session containing the one fragment of written information and the at least one other fragment of written information is closed.

8. (New) The method according to claim 7, wherein the closed session contains address zones that have not been written.

9. (New) The method according to claim 1, wherein at least one of the one fragment of written information and the at least one

other fragment of written information is closed and contains address zones that have not been written.
